## Streamline Your Internal and External Financial Reporting

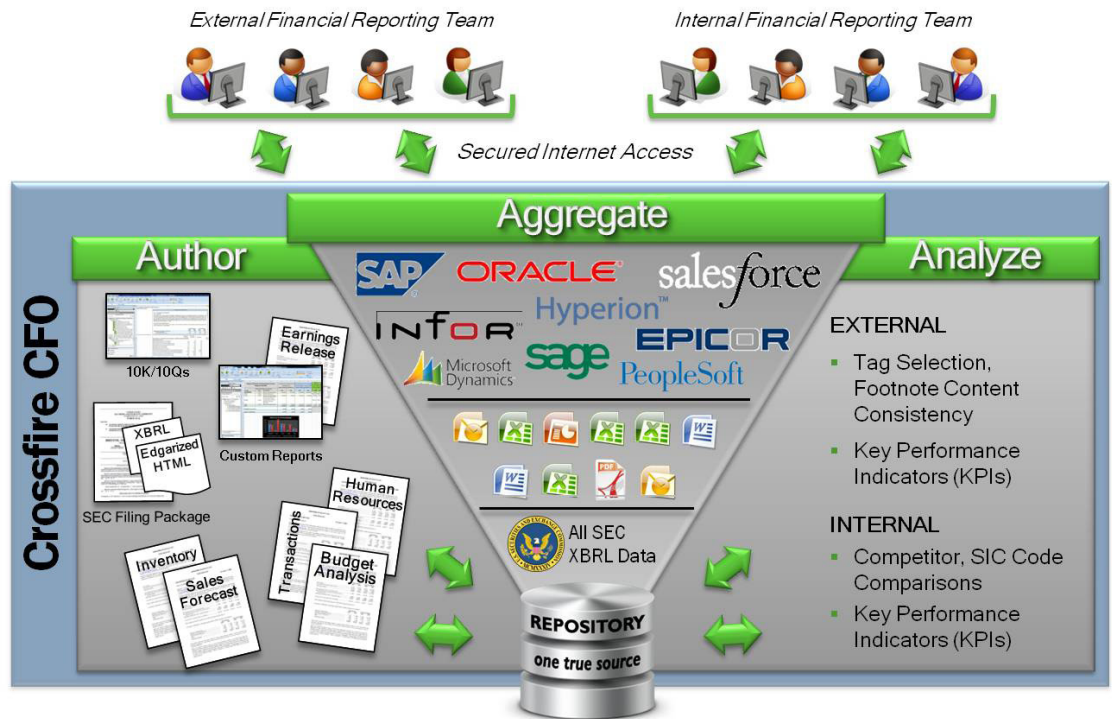

Rivet's **Crossfire CFO** automatically aggregates external close documents, internal financial and non-financial data, and external XBRL data into a single repository for complete data control and powerful enterprise analytics.

**CFO** data adapters reach directly into your enterprise data sources to pull both financial and non-financial data into the repository so

your reporting data and analytics are always accurate, complete and verifiable. **CFO** also pulls in all XBRL feeds from the SEC to integrate the filing data of your peers and competitors with your internal data, creating an even richer mix of information to analyze and report.

**CFO**'s single data repository supports authoring of XBRL filings for external regulatory compliance,

financial statements and consolidations for internal departmental and corporate reporting, and peer group comparisons for performance improvement. Rivet CFO empowers you to take optimum advantage of your most valuable information resource: Your data.

- ✓ Comprehensive Aggregation
- ✓ Roll Forward Functionality
- ✓ Intuitive Report Creation

- ✓ Benchmarking and Analysis
- ✓ Collaborative Work Space
- ✓ Change Once, Change Everywhere

- ✓ Robust Export Functionality
- ✓ Microsoft Based Platform
- ✓ SaaS 70 Type II Security

## It's All About the Data

Rivet's CFO solution leverages the power and capabilities of your existing consolidation, financial and non-financial systems to provide complete data compliance, control and communication throughout your organization.

- ✓ **Enterprise Taxonomy Management** – easily create, manage, and apply your own unique reporting taxonomy

to standardize reporting and make information meaningful for your entire organization

- ✓ **Improve Accuracy Design** – Increased access and integration with your existing data provides you and your team accuracy and accountability you can trust
- ✓ **Real-Time Data Refresh** – Update all custom reports, compliance filings, and analytic models as the data is changed

in your source systems – quicker access to information means quicker decision making

- ✓ **Secure Alerts** – Set secure destinations for companywide alerts and trigger report publishing and distribution via email or RSS feeds when data changes – stay in touch with changes as they occur
